Professional Summary

Information Technology student with experience in backend development, REST API design, distributed systems, and full-stack web development. Strong foundation in Python, JavaScript, Data Structures and Algorithms, and database systems. Passionate about building scalable software solutions and solving complex engineering problems.

Education

B.E. Information Technology — Terna Engineering College, Mumbai University 2023–2027
CGPA: 8.44

Technical Skills

Languages: Python, JavaScript, C, SQL

Frameworks and Technologies: FastAPI, Flask, Express.js, Node.js, MongoDB

Data Science: Pandas, NumPy, Scikit-Learn, Matplotlib

Tools: Git, GitHub, VS Code, Postman, OAuth, Cloudinary

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, REST APIs, Backend Development, Database Design

Professional Experience

Software Developer Intern — EazyByts June 2025 – July 2025

- Developed backend functionalities and REST APIs for multiple web applications.
- Worked across MERN-stack projects implementing business logic and data handling features.
- Integrated frontend and backend components to ensure seamless data communication.
- Identified and resolved bugs, improving application stability and reliability.

Projects

Distributed Task Execution System *Node.js, WebSockets, UUID*

- Designed and implemented a distributed task execution system using WebSocket-based communication between a central server and worker nodes.
- Built UUID-based worker registration for dynamic scaling and node identification.
- Developed real-time task distribution and result collection pipelines.
- Implemented worker health monitoring using CPU and disk usage metrics.
- Engineered fault-tolerant handling for worker disconnections and reconnections.

XAI for Stress and Mental Health Prediction *Python, Flask, Scikit-Learn*

- Built a machine learning model to predict stress levels using behavioral and survey-based datasets.
- Applied explainable AI techniques to visualize feature importance and model predictions.
- Developed a Flask backend to expose prediction services through APIs.
- Improved model transparency through interpretable prediction insights.

Achievements

- Selected among 59 teams from over 2000+ applicants for the national-level KJSSE Hackathon.
- Built a blockchain-based application within a 24-hour development cycle.
- Active practitioner of Data Structures and Algorithms through LeetCode.
