Professional Summary

Fresher Software Developer skilled in full-stack development using the MERN stack, with experience in building backend services using Flask,express and Django. Strong foundation in Python and JavaScript, with working knowledge of machine learning concepts and data processing. Interested in developing scalable, data-driven applications across web and backend systems.

Education

B.E. Information Technology — Mumbai University 2023–2027
GPA: 8.41

Technical Skills

Languages: C, JavaScript, Python

Frameworks & Tools: MERN , Pandas , Matplotlib , Scikit-learn , Numpy .

Expertise: Data Structures & Algorithms (DSA), Full Stack Development, Machine Learning

Experience

Software Developer Intern — EazyByts
June 2025 – July 2025

- Developed backend functionalities and APIs to support application features and data processing
- Integrated frontend and backend components, ensuring smooth data communication and user interaction
- Identified and fixed bugs, improving system performance and reliability
- Contributed to feature development in a collaborative development environment

Projects

Distributed Task Execution System (WebSocket-Based Architecture)
Tech Stack: Node.js, WebSockets , UUID, System Monitoring (CPU/Disk , Web -scraping.

- Designed and implemented a distributed system for task execution using WebSocket-based communication between central server and worker nodes
- Built a worker registration mechanism with unique node identification using UUIDs for dynamic scaling
- Developed real-time bidirectional communication pipeline for task distribution and result collection
- Implemented system health monitoring (CPU, disk usage) from worker nodes to optimize task allocation
- Engineered fault-tolerant handling for worker disconnections and reconnections

XAI for Stress and Mental Health Prediction
Tech Stack: Python, Flask, scikit-learn

- Built a machine learning model to predict stress levels using behavioral and survey-based data
- Implemented feature importance and visualization techniques to interpret model predictions
- Developed a Flask backend to serve prediction results and explanation insights

Extracurricular

Hackathon Experience

- Participated in multiple hackathons, working on rapid prototyping and problem-solving under strict time constraints
- Selected among **59 teams out of 2000+ applicants** for the national-level KJSSE Hackathon
- Built a functional blockchain-based application within 24 hours, quickly adapting to new technologies and concepts
- Demonstrated strong ability to learn, collaborate, and deliver solutions in high-pressure evnt.

Interests

Competitive Technical Events , Businesses and Sports
